Hi !

I'm testing a distributed application and I would to use OpenVZ.

I would like to know if mqueue messages are supported in the virtualized world.

Thank you !

Hi !

Let's try to be a little bit more precise.

I'm am using OpenVZ with the kernel 2.18 with the os template mandriva-2006-i386-minimal.

The version of vzctl is 3.0.22.

My kernel has been compiled with the support of mqueue messages.

When I try this on a virtual machine :

```
root# mount -t mqueue none /dev/mqueue
```

I get the error message :

"Unknown type of file system mqueue".

When I try to do it a "real" terminal, I do not have any error message.

So, I would like to know if and how I can fix that.

Thank you very much !
