
Subject: Network Speeds slow only with openvz kernel

Posted by [poke](#) on Thu, 21 Aug 2008 06:21:00 GMT

[View Forum Message](#) <> [Reply to Message](#)

Hi All,

I'm having the weirdest experience. I have an openvz node that will not up/download over 200 KB/s on the public side. This is on the host node and VPSs. Also, when I download from another server on the same switch, I CAN achieve full speed.. ?

When I boot into the stock kernel I am able to download at the full 10 Mbit speed around 1.07 MB/s.

So this must be isolated to the openvz kernel? How should I go about troubleshooting this issue?

Thanks for any help!

Best Regards,
poke

Hello,

- could you please specify the kernel you use?
 - could you please specify your network configuration? ("ip a l" (from HN and CT)) What OS do you have? Do you know the way to reproduce the issue?
 - do you use traffic limiting? (iptables/tc)
-

Hello,

Thanks for your reply!

Kernel used:

```
# uname -a
```

```
Linux vz20.vpslogin.com 2.6.18-92.1.1.el5.028stab057.2 #1 SMP Mon Jul 21 17:08:31 MSD 2008  
x86_64 x86_64 x86_64 GNU/Linux
```

Running Centos 5.2 x64

```
# ip a l
2: lo: <LOOPBACK,UP,LOWER_UP> mtu 16436 qdisc noqueue
    link/loopback 00:00:00:00:00:00 brd 00:00:00:00:00:00
    inet 127.0.0.1/8 scope host lo
    inet6 ::1/128 scope host
        valid_lft forever preferred_lft forever
4: eth0: <BROADCAST,MULTICAST,UP,LOWER_UP> mtu 1500 qdisc cbq qlen 1000
    link/ether 00:1d:92:aa:40:ed brd ff:ff:ff:ff:ff:ff
    inet 58.241.255.38/29 brd 58.241.255.39 scope global eth0
    inet6 fe80::21d:92ff:feaa:40ed/64 scope link
        valid_lft forever preferred_lft forever
1: sit0: <NOARP> mtu 1480 qdisc noop
    link/sit 0.0.0.0 brd 0.0.0.0
3: venet0: <BROADCAST,POINTOPOINT,NOARP,UP,LOWER_UP> mtu 1500 qdisc noqueue
    link/void
```

This was a fresh openvz install as a HyperVM Slave. iptables is enabled but not traffic limiting, at least I don't think it is. I've run `service iptables stop` and it changes nothing.

As far as reproducing the slow network speeds, I can only show you the machine in each kernel:

ovzkernel:

```
# wget http://www.sea01.softlayer.com/downloads/test100.zip
--20:02:05-- http://www.sea01.softlayer.com/downloads/test100.zip
Resolving www.sea01.softlayer.com... 67.228.118.21
Connecting to www.sea01.softlayer.com|67.228.118.21|:80... connected.
HTTP request sent, awaiting response... 200 OK
Length: 104874307 (100M) [application/zip]
Saving to: `test100.zip.2'
```

```
3% [==>                                     ] 3,507,056  197K/s  eta 8m
46s
```

Stock Kernel:

```
# uname -r
2.6.18-92.1.10.el5
[root@vz20 ~]# cd JBWH/
[root@vz20 JBWH]# wget http://www.sea01.softlayer.com/downloads/test100.zip
--20:06:10-- http://www.sea01.softlayer.com/downloads/test100.zip
Resolving www.sea01.softlayer.com... 67.228.118.21
Connecting to www.sea01.softlayer.com|67.228.118.21|:80... connected.
HTTP request sent, awaiting response... 200 OK
Length: 104874307 (100M) [application/zip]
Saving to: `test100.zip'
```

```
9% [=====>                               ] 10,372,024  1.10M/s  eta
1m 56s
```

I appreciate any advice/input.

Thank You

Is it from HN or inside VE? You have mentioned that this issue affected as HN and VE. Is it right?

correct. The slow speeds happen on both the HN and in VEs.

Thanks

Hi,

some stupid questions:

- do you have any limitations/failcounters set on you HN or inside the VE. (cat

/proc/user_beancounters)

- ovz kernel is based on the 2.6.18-92.1.1.el5 kernel. Do you have a chance to check 2.6.18-92.1.1.el5 kernel?
 - what driver is responsible for your net card?
 - could you please show lspci output?
 - and also "tc class show dev eth0"?
-

Unfortunately we have had to cancel the server. It's strange, the first time we've ever encountered the issue...

As listed I was able to boot into the newest stock and openvz kernels and the stock kernel provided full network speed whereas the ovzkernel was limited to 200 KB/s on the HN and VE side.

I'm unable to further troubleshoot as the server is no longer online.

Thanks for trying to help though. Have a great day

Cheers

Hi,

anyway, may be you've limited/checked /proc/user_beancounters. No?

Do you remember the network card that is on your server?

Thank you very much for the assistance.

Actually I can verify this exact same issue with the only difference of booting with the VZ and RHEL Kernels:

vmlinux-2.6.18-92.1.1.el5.028stab057.2

vmlinux-2.6.18-92.1.10.el5

In this example a long distance download between North America and the UK hits only 4.54 MB/s but when using the stock RHEL kernel I get 11 MB/s each time.

iptables is turned off too.
