hello, i'm trying to install ovzkernel-2.6.18-92.1.1.el5.028stab057.2 and when i install it with
yum install ovzkernel

i get

```
--> Running transaction check
---> Package ovzkernel.i686 0:2.6.18-92.1.1.el5.028stab057.2 set to be installed
--> Processing Conflict: ovzkernel conflicts dev < 3.2-7
--> Finished Dependency Resolution
Error: ovzkernel conflicts with dev < 3.2-7
```

same error when i try to install vzctl to anyone can help me plz in this.....
anyone can contact me on hotmail: bahaider_cool@hotmail.com
or gmail: haider.ghaleb@gmail.com

Best Regards,
Haider Ghaleb

Hello Haider,

could you please tell the Host OS do you use?

Thanks,
Konstantin

But how come that you have such an old "dev"??
i've checked my RHEL5 node, it has newer "dev" and as CentOS5 most likely has the same...

Can you please post here the output of following commands?:

```
# cat /etc/*rele*  
# uname -a  
# rpm -q udev  
# rpm -q --provides udev  
# rpm -q --whatprovides dev
```

Thank you,
Konstantin

hi, turns out im having sort of the same problem, only i get it while doing a yum groupinstall
"Gnome Desktop Environment"

in answer to your last question:

Can you please post here the output of following commands?:

```
cat /etc/*rele*:  
CentOS release 5.2 (Final)
```

```
uname -a:  
Linux 2.6.18-Aug5-v06iscsi-Xeon64 #4 SMP Mon Aug 11 03:55:01 EDT 2008 i686 i686 i386  
GNU/Linux
```

```
rpm -q udev:  
udev-095-14.9.el5
```

```
rpm -q --provides udev:  
config(udev) = 095-14.9.el5  
dev = 0:3.12-1  
udev-persistent = 0:095-14.9.el5  
udev = 095-14.9.el5
```

```
rpm -q --whatprovides dev:  
vzdev-3.3.13-1.4.swsoft  
udev-095-14.9.el5
```

any help would be much appreciated,

jevo

Hi,

if you're using udev inside VE you don't need vzdev.
udev provides appropriate dev capability but vzdev doesn't.
