Subject: [solved] tcprcvbuf not enough?

An application inside the VE is not working properly, so I decided to check the beancounters and this is what I saw:

http://i33.tinypic.com/210kgpj.png

My current setting is based on the "vps.basic" configuration file, so this is what I have for TCP send/recv buffer size:

TCPSNDBUF="1720320:2703360"
TCPRCVBUF="1720320:2703360"

Since I have about 8 fail count in the short time I was using my VE, should I increase this limit or ignore it because this is normal?

Btw, are these limit in kilobytes or bytes or some other units?

not normal.
bytes.

What would be an appropriate size?

Impossible to answer - really depends on applications and their load.
The best way is to raise limits very high and monitor the usage for 1-2 days and set max reached value + 10-20%.
