Hi,
my Name is Ralph and I'm new to Linux and as well to this forum.

This is from my /grub/menu.lst:

```
title Debian GNU/Linux, kernel 2.6.18-12-fza-amd64
root (hd0,1)
kernel /boot/vmlinuz-2.6.18-12-fza-amd64 root=/dev/md1 ro
initrd /boot/initrd.img-2.6.18-12-fza-amd64
savedefault

title Debian GNU/Linux, kernel 2.6.18-12-fza-amd64 (single-user mode)
root (hd0,1)
kernel /boot/vmlinuz-2.6.18-12-fza-amd64 root=/dev/md1 ro single
initrd /boot/initrd.img-2.6.18-12-fza-amd64
savedefault

title Debian GNU/Linux, kernel 2.6.18-6-amd64
root (hd0,1)
kernel /boot/vmlinuz-2.6.18-6-amd64 root=/dev/md1 ro
initrd /boot/initrd.img-2.6.18-6-amd64
savedefault

title Debian GNU/Linux, kernel 2.6.18-6-amd64 (single-user mode)
root (hd0,1)
kernel /boot/vmlinuz-2.6.18-6-amd64 root=/dev/md1 ro single
initrd /boot/initrd.img-2.6.18-6-amd64
savedefault
```

END DEBIAN AUTOMAGIC KERNELS LIST

I've installed openVZ with webVZ and created a new container. After I changed into directory webvz.2.0 and start the VE.

```
server1:~/webvz.2.0# vzctl enter 177
entered into VE 177
root@localhost:/#
```

Next I did

```
root@localhost:/# apt-get update
Err ftp://mirror.hetzner.de etch Release.gpg
Temporary failure resolving 'mirror.hetzner.de'
```

```
Err http://security.debian.org etch/updates Release.gpg
  Temporary failure resolving 'security.debian.org'
Err http://ftp.de.debian.org etch/volatile Release.gpg
  Temporary failure resolving 'ftp.de.debian.org'
Err http://download.openvz.org etch Release.gpg
  Temporary failure resolving 'download.openvz.org'

W: You may want to run apt-get update to correct these problems
E: Some index files failed to download, they have been ignored, or old ones used instead.
root@localhost:/#
```

I want to install some software in that VE, but its not possible.

Can somebody please lend a hand? I looked out to the web, but could'nt find any solution.

Thanks in advance for your help

regards

Ralph

Hi Ralph,

if not set; please update your nameserver configuration:

via console:

```
$ vzctl set 177 --nameserver 213.133.100.100 --nameserver 213.133.98.98 --nameserver
213.133.99.99 --save
```

(used the hetznerns colocation dns server)

or use the webvz config tool to setup.

Btw, have your containers a connection to the net, can you ping some ip, above ?

Regards,
Thorsten
