Subject: per-container?
Posted by isoips on Wed, 01 Oct 2008 07:29:27 GMT

I read the guide to install openvz, but I don't understand what is a per-container?
This is the context:
"The reason why you should do so is that if you wish to use OpenVZ per-container disk quota, you won't be able to use usual Linux disk quotas on the same partition."

Thanks

«OpenVZ per-container disk quota» means that you can set up disk quota for every container (i.e. VE, VPS) in your system.
