Subject: *SOLVED* cpanel quota no working
Posted by zotta on Tue, 06 Jun 2006 00:04:20 GMT

hi

i have the problem with cpanel
i have in my server virtouzzo 3.0 and cent0s 4.3
and the quota not workign fine

i try the all post sugerenci
this is result

Installing Default Quota Databases......Done
Quotas are now on
Updating Quota Files......

....Done
Resetting quota for demo to 200 M
Resetting quota for nethostc to 200 M

this shows to me but when I am going to even see in whm it continues showing quota unlimited

any help

I too have noticed crazy issues since I've upgraded to 3.0.0-7 of vzquota. I've had two servers that the fiber channel mount of /vz went read-only and cPanel quotas are not working and etc. The EXT3 journals went crazy and the system remounted them as read-only. This was only after upgrading the vzquota and after running 3.0.0-6 and other versions for months without problems.

I'm trying to revert back to vzquota 3.0.0-6 and hope that works and solves the problem.

I swear on it that this is a problem with the latest vzquota, I swear it, but I dont know where to begin.

Could you check, does vzquota work without CPanel?

As I understood, your problem is that in CPanel user/group quotas are showed as unlimited, while should be limited, right?

If so, vass gave you right link - the same issue was resolved there. If it doesn't help, PM me credentials of your server with description, what exactly you want to be fixed. I'll try to resolve it directly on your node.

It is strange, as there were not so much changes between them. Do you use OpenVZ vzquota package or rebuild it by yourself?
