Subject: vps.mount not mounting

I'm trying to use vps.mount to setup some shared storage and using vps.mount doesn't mount the file systems.

If I run the commands _after_ the VPS is up they mount fine.

I am seeing some conflicting info on using bind mounts. The wiki says "The container must be started and the destination directory must exist." and according to the Users Guide on page 89 the mount scripts run before a VPS has started.

I've seen many posts here saying that they are using mount scripts just fine, so I hope I'm just missing something.

Thanks,
Michael

cat vps.mount
#!/bin/bash

mount -n --bind /bigdisk/vars/${VEID} /vz/root/${VEID}/var
mount -n --bind /bigdisk/yum_cache /vz/root/${VEID}/var/cache/yum
mount -n --bind /bigdisk/homes/${VEID} /vz/root/${VEID}/home

Ok, so I was just missing something...

cat vps.mount
#!/bin/bash

. /etc/sysconfig/vz
. $VE_CONFFILE

mount -n --bind /bigdisk/vars/${VEID} /vz/root/${VEID}/var
mount -n --bind /bigdisk/yum_cache /vz/root/${VEID}/var/cache/yum
mount -n --bind /bigdisk/homes/${VEID} /vz/root/${VEID}/home

Sorry for the wasted bits.
