Subject: Another NFS-related issue (vzdump --suspend can't stop lockd)

I have same setup as in my previous posting (
http://forum.openvz.org/index.php?t=tree&goto=33262& #msg_33262):
HN debian/FZA 2.6.18-12-fza-amd64 kernel, Debian Etch, vzctl 3.0.22-1dso1,
VE Centos 5.2, nfstools 1.0.9, has NFS mount.

I'm trying to do vzdump --suspend --exclude-path /home VE.
(BTW, do I ever need --exclude-path, won't it exclude NFS mount automatically?)

First sync goes OK, but on second sync I get:
INFO: suspend vps
Setting up checkpoint...
      suspend...
Can not suspend VE: Resource temporarily unavailable
Error: foreign process 22159/21135(lockd) inside VE (e.g. vzctl enter or vzctl exec).
Error: suspend is impossible now.
Error: foreign process 22159/21135(lockd) inside VE (e.g. vzctl enter or vzctl exec).
Error: suspend is impossible now.
Error: foreign process 22159/21135(lockd) inside VE (e.g. vzctl enter or vzctl exec).
Error: suspend is impossible now.
Checkpointing failed

As far as I understand, that's NFS lockd, right?
What should I do? Not using lockd is unacceptable for several reasons. Umounting NFS renders
VE unusable, so it'd be as good as vzdump --stop. If you suggest using vzdump --checkpoint, I
have another issue for ya.

Hi,

How lockd was started? Did you start it from inside the HN like "vzctl exec ..."?

How lockd was started? Did you start it from inside the HN like "vzctl exec ..."?

No. I hit this problem, stopped the container, did the backup and started the container again. And run vzdump again to post correct text of error message to the forum. So all this was after a clean container restart.

Hello,

could you please check that:

1. Using our 2.6.18 kernel from git repository you are able to reproduce that.
http://git.openvz.org/ (linux-2.6.18-openvz project)
or may be you can get/compile the kernel from here
(http://download.openvz.org/kernel/branches/2.6.18/current/)
(may be this issue was already fixed)

2. Please make sure that "vzctl chkpnt $VEID" bumps into that error.

Then please file the bug in OpenVZ bugzilla http://bugzilla.openvz.org/.
Thank You very much for the assistance!
