I hope command sequence says it all.

May be it's important to note that LVM volume group name was equal to hostname, but now hostname has changed...

Also it's important to note that I can create and mount /srv snapshot manually.

HN# uname -a

Linux host_name 2.6.18-12-fza-amd64 #1 SMP Sun May 18 09:57:08 UTC 2008 x86_64
GNU/Linux

HN# vzctl --version

vzctl version 3.0.22-1dso1

HN# vzdump --snapshot --dumpdir /tmp 101

INFO: starting backup for VPS 101 (/srv/lib/vz/private/101)

Use of uninitialized value in concatenation (.) or string at /usr/bin/vzdump line 683.

INFO: creating lvm snapshot of /dev/mapper/olympic--temp-srv1 ('/dev//vzsnap')

Use of uninitialized value in concatenation (.) or string at /usr/bin/vzdump line 685.

Use of uninitialized value in concatenation (.) or string at /usr/bin/vzdump line 685.

"/dev//": Invalid path for Logical Volume

The origin name should include the volume group.

lvcreate: Create a logical volume

[here goes lvcreate commandline help]

umount: /vzsnap: not mounted

Volume group "vzsnap" not found

ERROR: creating backup for VPS 101 failed (0.00 minutes): command '/sbin/lvcreate --size 500m --snapshot --name vzsnap /dev//' failed with exit code 3 at /usr/bin/vzdump line 290.

Hello,

please check this <http://wiki.openvz.org/Vzdump#Bugs> (Bugs section).
