---

I've been using Kernel 2.6.24 ovz005.1 for some time and it's been stable. A few days ago I switched to Kernel 2.6.24 ovz006.1 and I've had two server crashes (different computers). Has anyone else had any problems or is it my bad luck? I'm about to open a bug on this.

Also - I see there is a Kernel 2.6.24 ovz006.2. Other than the version bug has anything else been fixed or is it basically the same thing?
