Subject: Locale in VPS in production
Posted by laurent on Wed, 07 Jun 2006 13:01:52 GMT

hello

i have the same problem described here (
  http://forum.openvz.org/index.php?t=tree&goto=3166&& amp; amp; amp;
amp;srch=locale#msg_3166
(My HN is feodora core 4.
But when I install a fedora core 4 VPS using the minimal template, locales are not installed in the same manner as the fedora HN, and I don't see any LANG setting in my VPS environment.
On the HN, the fedora installer handles this, and I don't know how to get locales installed and configured in the VPS. I want en_US, but in /usr/share/locale I only see en_GB, plus various non english languages...........)

But My VPS is in production.
i have installed in this VPS a lot of software and many hours of configuration.
i didn't have the french support.
i tried what was described in this URL, and Ok it's work fine for new VPS.
But, is there any way to add the french i18n in the VPS in production whithout rebuilding it from template ?

thanks for help.
