Subject: Ipv6 problem
Posted by jeff0210 on Thu, 23 Oct 2008 13:34:51 GMT

Hello to all,
I have the problem following, with the kernel 2.6.18-fza the implementation Ipv6 works on venet0, but the same configuration with the kernel 2.6.24 (just restart on the new kernel) Ipv6 does not work any more on venet0, obliged to implement a bridge.
It is normal, if yes how to put on Ipv6 on venet.
Or is it a bug on the new Kernel or kernl-patch ?

Thank you for your help.

ASAP
