I have a Dedicated Server with 10 IP's
1 is set as the Master IP for my control login.

Then i have one set in the Container

Creating VE private area (centos-5-i386-default)
Performing postcreate actions
VE private area was created
non-option ARGV-elements: Server
Saved parameters for VE 1
Saved parameters for VE 1
Saved parameters for VE 1
Saved parameters for VE 1
Starting VE ...
VE is mounted
VE start in progress...
Changing password for user root.
passwd: all authentication tokens updated successfully.
Stopping VE ...
VE was stopped
VE is unmounted
Starting VE ...
VE is mounted
Adding IP address(es): 213.*.*.*
Setting CPU units: 250
Configure meminfo: 7680
Set hostname: server1.barkersmedia.co.uk
File resolv.conf was modified
VE start in progress...

This is my output from WebVZ Excluding the *'s

But then when i got to the 213.*.*.*

It just points at my Node Server This might just be me being a NOOB but how do i get the IP to point to the Container not the host

My Server is running CentOS 5.2

I have searched the forums and can not find the answer to my question

have you been in the CT and pinged the HN?

and pinged the IP from a remote machine?

usually if the IP does not assign correctly then the CT will not start

I found out it was a problem with the way IP's are assigned to a Dedicated Server with Fasthosts you have to contact there customer support give them a mac address for the Server and the IP to assign to it and they will do the rest for you you just have to have the VPS running for the IP to work after
