Experimenting with upgrading to fedora 10 and getting conflicts with something called dummy-centos-4. I'm not sure what that is or why I have it but I think I saw something about some other dummy RPM having to do with version issues.

What do I need to do with this? Thanks in advance.

This is for 64 bit Fedora 10.

I think I got it all working. Here's what I did.

rpm -e dummy-centos-4 --nodeps --justdb

Then the standard yum upgrade worked. Went for fedora 8 to fedora 10.

HI

I got the same error, removed the package yum upgrade went well

the problem is that MailScanner can complete the instalation and sendmail cant start

Did you have any issue after your update?

Regards
