Subject: mingetty causing high load - fedora 10

I upgraded my VEs from Fedora 8 to Fedora 10. Everything seemed to be working OK except that I've noticed that after a day or so the the mingetty processes (using top) are showing high CPU usage.

Restarting the VZ service clears the problem.

Has anyone seen anything like this? Thanks in advance.

I figured it out. Fedora 10 has a different init sequence. Apparently the inittab file is replaced by the /etc/event.d directory. I deleted all the /etc/event.d/tty* files in the VEs and I think it's fixed.
