I try to have two IP address in open VZ by using ifconfig. Here is the output from ifconfig :-

```
yanchengdev:/$ ifconfig
lo    Link encap:Local Loopback
      inet addr:127.0.0.1  Mask:255.0.0.0

      UP BROADCAST POINTOPOINT RUNNING NOARP MTU:1500  Metric:1

venet0:1  Link encap:UNSPEC HWaddr 00-00-00-00-00-00-00-00-00-00-00-00-00-00-00-00

      UP BROADCAST POINTOPOINT RUNNING NOARP MTU:1500  Metric:1
```

The problem is, when I ping my openvz from and external machine,

```
ping 192.168.12.156 (OK. Give me responde)
ping 192.168.12.166 (Not OK. No responde)
```

I try to tail the openvz config file

```
[yancheng@yancheng ~]$ tail /etc/vz/conf/102.conf
```

```
# CPU fair sheduler parameter
CPUUNITS="5000"
VE_ROOT="/vz/root/$VEID"
VE_PRIVATE="/vz/private/$VEID"
OSTEMPLATE="debian-4.0-i386-minimal"
ORIGIN_SAMPLE="vps.basic"
IP_ADDRESS="192.168.12.156"
```

```
NAMESERVER="192.168.12.202"  
HOSTNAME="yanchengdev.my.xxx.com"  
[yancheng@yancheng ~]$
```

So, can I specific more than 1 IP address in IP\_ADDRESS field? Is this the root cause of unable to have two IP address in openvz?

Thanks!  
Cheok

Hello,

please show  
"ip a l", "ip rule list", "ip route list" from the HN and from inside the VE.  
"arp -n" from the HN.  
Check your iptables rules.

Try to ping 192.168.12.166 from an external node and run tcpdump on the HN and inside VE at the same moment.
