Dear All

My VPS's network card is venet0:0

Can I change network card to eth0 for VPS??

I want to install heartbeat for VPS.

Does everyone have any suggest?

Thanks

BR
Nick

I think you can try using ifrename.

Or, if you switch from venet to veth, you can use any interface name you want right from the start.

Dear Kir

Thanks for your support.

I saw this document http://wiki.openvz.org/Virtual_Ethernet_device

I can create new network. It name is eth0

But when I reboot this VPS. All setting don't save.

Do you have any suggest??

Thanks

BR
Nick
