Subject: kernel problem !!
Posted by Java on Thu, 18 Dec 2008 19:38:11 GMT

Hi pals,

I trying to install the new kernel for openvz by using the command below

rpm -ihv http://download.openvz.org/kernel/branches/rhel5-2.6.18/028s
tab059.6/ovzkernel-PAE-2.6.18-92.1.13.el5.028stab059.6.i686. rpm

on centos 4 64 bit

but every time i got the same error

WARNING: No module mptscsi found for kernel 2.6.18-92.1.13.el5.028stab059.6PAE, continuing
anyway

and after I modified the grub the kernel failed to boot

so any ideas !!!

Thanks

solved but there's a new problem comes up

I cannot install vzyum or vzpkg

Quote:Error: Missing Dependency: cElementTree.so is needed by package vzyum

I installed the RPM for elementtree

Quote:rpm -ihv elementtree-1.2.4-20041228.0.9.1asp.noarch.rpm

the it still give me the same error

Quote:Error: Missing Dependency: cElementTree.so is needed by package vzyum

any ideas ?

http://wiki.openvz.org/Install_OpenVZ_on_a_x86_64_system_Cen tos-Fedora

search "cElementTree.so" there.

Hope this helps.
