Hi OpenVz.

I have made a script for installing openvz vps , from the HOST OS.

but when i am compiling a bash script on the VPS from the HOST OS
using the vzctl exec command it can not find a certain file because it isn't located in its PATH.

```
vzctl exec 113 'which mysql_config'
```

```
which: no mysql_config in (/bin:/sbin:/usr/bin:/usr/sbin:.)
```

is it possible to add the directory where in this case 'mysql_config' is located , so i still can run my
install
script from my HOST OS with an exec 'command'...

It works fine when i'm logged into the 113 VPS...

Thanks

/Michael

Hi,

try :

```
$ vzctl exec <CTID> 'export PATH=<_YOUR_PATH_SETTING_>:$PATH; which mysql_config'
```

Bye,
Thorsten

Hi Thorsten

Thanks a lot...

/Michael
