Hi There

When I try to migrate a VPS from one server to another (source: 2.6.24-6-fza-amd64, destination: 2.6.18-12-fza-amd64) with the command

```
vzmigrate --online vzhost02 101
```

the following error appears:

```
vzhost01:/vz# vz migrate -v --online vzhost02 101
OPT:-v
OPT:--online
OPT:vzhost02
Starting OpenVZ is running...
101.conf          100% 1754   1.7KB/s   00:00

Restoring failed:
Error: Unknown image version: 400. Can't restore.
Container is unmounted
Error: Resuming...
vzquota : (error) Quota is not running for id 101
```

The guest os is just a plain debian from the template `debian-4.0-amd64-minimal.tar.gz` with an `apache2` installed and running).

Would be great if you can help us!

Thank you a lot in advance

Remo

It's not possible to restore a cpt dump from an
2.6.24 to an 2.6.18 kernel

cpt versions mismatched -> see Error: Unknown image version: 400. Can't restore.

overview, taken from the OpenVZ git tree 2.6.27

[linux-2.6.27-openvz] / include / linux / cpt_image.h

[...]

```
#define CPT_VERSION_8      0
#define CPT_VERSION_9      0x100
#define CPT_VERSION_9_1    0x101
#define CPT_VERSION_9_2    0x102
#define CPT_VERSION_16     0x200
#define CPT_VERSION_18     0x300
#define CPT_VERSION_18_1   0x301
#define CPT_VERSION_20     0x400
#define CPT_VERSION_24     0x500
#define CPT_VERSION_26     0x600
#define CPT_VERSION_27     0x700
```

Bye,
Thorsten

[View Forum Message](#) <> [Reply to Message](#)

and the second error :

[...]

> Error: HZ mismatch: 1000 != 250

target kernel isn't compile with kernel option :

[...]

```
CONFIG_HZ_1000=y
CONFIG_HZ=1000
```

on checkpointing/restoring source and target kernels must setup on built with same HZ.

Bye,
Thorsten
