Hey, I am joescmo, but i changed by name to dmbt, as thats my real username. Anyway, I have created an ubuntu dapper template, and I need some real testing, just to see if it works.

The download is at <http://dudcore.net/ubuntu/ubuntu-6.06-i386-minimal.tar.gz> , thanks to dudcore for generously hosting the file. Anyway, please tell me if it works correctly, and if it does work correctly, can someone post it to the download page? Thanks.

Some notes:

See the wiki page here: [http://wiki.openvz.org/Ubuntu\\_Template](http://wiki.openvz.org/Ubuntu_Template) .

You must install a locale. apt-get install language-pack-en for english.

I have tested it and it works succesfully on other servers besides my own. Any chance anyone can move it to the download section?

Just a note, that if you want dns, youll have to change resolv.conf, and change 10.0.0.1 to whatever your dns server is.

Can you, please, write an article in <http://wiki.openvz.org> in Template section. It'll be very useful for others!

Thanks.

Created a wiki page of how to use the template and a simple summary on how I made it.  
[http://wiki.openvz.org/Ubuntu\\_Template](http://wiki.openvz.org/Ubuntu_Template) .
