Subject: Running Netatalk inside a VE
Posted by odiobill on Fri, 02 Jan 2009 10:16:16 GMT

Hi all,

I'm trying to run netatalk inside a VE without success. Everything is fine from the host system but every guest are giving me the same error. This is an example from a machine that before was working fine (I just done a migration from vserver to openvz).

Quote:
Jan 2 09:00:37 umpalumpa afpd[433]: main: atp_open: Address family not supported by protocol
Jan 2 09:00:37 umpalumpa afpd[433]: ASIP started on 192.168.1.249:548(4) (2.0.3)
Jan 2 09:00:37 umpalumpa afpd[433]: DSIConfigInit: Error registering
afp://192.168.1.249/?NAME=umpalumpa&ZONE= with SRVLOC

There are some hints that I can follow?

Thanks,

//Davide
