Hello,

Why cpulimit doesn't work?
I created the container with cpulimit 40(of quad core processor).
Launched stress in it and the main's server cpu consumption were 100% of all cores, load
averages ~200. How I understand it must be only ~10%..

I have installed it "apt-get install cpulimit"
kernel: 2.6.26-1-openvz-686

Hi.

Please, check if stable 2.6.18 rhel5 based OVZ kernel works fine with your configuration of
--cpulimit and if yes - please, file a bug about the problem.

Thank you.

Hello,

please look here

 http://forum.openvz.org/index.php?t=msg&goto=30020&& amp;srch=cpulimit#msg_30194

this information is relevant to 2.6.26 kernel too.
