Console dump enclosed. Ubuntu 8.04 running a ubuntu openvz kernel. I cannot stop any container. When I do, the system crashes. Also for some reason which may or may not be related one of the containers keeps getting Disk quota exceeded no matter what I set the DISKSIZE to.

Thanks,  
Jim.

I did an upgrade of the system and it installed a later kernel.

Linux image33 2.6.24-23-openvz #1 SMP Thu Nov 27 21:52:29 UTC 2008 i686 i686 i386  
GNU/Linux

This one works OK so far.

Jim.
