Why is ovzkernel-xen-2.6.18-92.1.18.el5.028stab060.2 so large? If you look at [http://download.openvz.org/kernel/branches/rhel5-2.6.18/028s tab060.2/](http://download.openvz.org/kernel/branches/rhel5-2.6.18/028s%20stab060.2/) you can see it is 43 megs vs 20 megs for the non xen version. If you look at [http://download.openvz.org/kernel/branches/rhel5-2.6.18/028s tab059.6/](http://download.openvz.org/kernel/branches/rhel5-2.6.18/028s%20stab059.6/) you can see they are both 20 megs
