
Subject: [SOLVED] HD quota incorrect
Posted by [Vadtec](#) on Wed, 11 Feb 2009 06:15:48 GMT
[View Forum Message](#) <> [Reply to Message](#)

Hi,

I am running CentOS 5.2 with HyperVM (the most current from their website) with OpenVZ as installed by HyperVM (ovzkernel-PAE.i686 2.6.18-92.1.18.el5.028 reported by yum).

The issue I am having is, in HyperVM the quota I am setting doesn't seem to be getting enforced in the vps. For example, I created a CentOS 5.2 VM with 100G of HD quota. When I run df on the VM, I see:

Filesystem	Size	Used	Avail	Use%	Mounted on
/dev/simfs	61G	342M	57G	1%	/

Similarly, I created a VM with 2TB of HD quota and saw the same output.

Is this something to do with the fact that I am using a 4TB LVM for the VMs HD space? Or something to do with quotas?

I am at a loss as to why it would show 61G instead of the HD I allocated in HyperVM.

Any help is greatly appreciated.

Vadtec

Hello,

first of all we should determine if it is HyperVM or OpenVZ specific problem.

Could you please show from inside the VE

```
# ls -l /etc/mtab
```

and also VE's configuration file (/etc/vz/conf/\$VEID.conf)

Subject: Re: HD quota incorrect
Posted by [Vadtec](#) on Wed, 11 Feb 2009 13:04:58 GMT

```
[root@vps2 ~]# ls -l /etc/mtab
-rw-r--r-- 1 root root 171 Feb 10 20:32 /etc/mtab
[root@vps2 ~]# cat /etc/mtab
/dev/simfs / reiserfs rw,usrquota,grpquota 0 0
/proc /proc proc rw 0 0
/sys /sys sysfs rw 0 0
none /dev/pts devpts rw 0 0
none /proc/sys/fs/binfmt_misc binfmt_misc rw 0 0
```

```
[root@vps2 ~]# df -h
Filesystem      Size  Used Avail Use% Mounted on
/dev/simfs      59G  342M  55G   1% /
[root@vps2 ~]# ls -l /etc/mtab
-rw-r--r-- 1 root root 171 Feb 10 20:32 /etc/mtab
[root@vps2 ~]# cat /etc/mtab
/dev/simfs / reiserfs rw,usrquota,grpquota 0 0
/proc /proc proc rw 0 0
/sys /sys sysfs rw 0 0
none /dev/pts devpts rw 0 0
none /proc/sys/fs/binfmt_misc binfmt_misc rw 0 0
```

```

That information was taken from my VM. I don't see this as being a HyperVM problem. HyperVM simply configures the VM in this case. It doesn't actually control the VM to the point of saying "You will have a HD of X size today." At least that's my interpretation of how it works. This is my first go with OpenVZ and HyperVM, so I am at a loss as to where the issue may lie. I have checked the documentation for both packages and haven't been able to find anything related to this particular issue. Your help is greatly appreciated.

Hello,

please try the following

(inside VE)

```
# rm /etc/mtab
# ln -s /proc/mounts /etc/mtab
```

Subject: Re: HD quota incorrect
Posted by [Vadtec](#) on Wed, 11 Feb 2009 13:46:18 GMT
[View Forum Message](#) <> [Reply to Message](#)

```
[root@vps2 ~]# rm /etc/mtab
rm: remove regular file `/etc/mtab'? y
[root@vps2 ~]# ln -s /proc/mounts /etc/mtab
[root@vps2 ~]# df -h
Filesystem      Size  Used Avail Use% Mounted on
/dev/simfs      59G  342M  55G   1% /
[root@vps2 ~]# ls -la /etc/mtab
lrwxrwxrwx 1 root root 12 Feb 11 04:52 /etc/mtab -> /proc/mounts
[root@vps2 ~]# ls -la /proc/mounts
lr-xr-xr-x 1 root root 11 Feb 11 04:52 /proc/mounts -> self/mounts
```

That made it worse. Taking what is shown in HyperVM for the resource limits for the VM:

```
Resource Used  Max
Disk  342 MB  100 GB
Inode  20445  52428800
Memory  23 MB  512 MB
```

Why is the VM showing only 59G when it has been configured for 100G?

Thanks again,

Vadtec

Could you please show

- "cat /proc/mounts", "df -h" from the HN and from inside the VE
 - "uname -a" from the HN
 - what otemplate did you use for VE?
 - vzctl --version
-

Subject: Re: HD quota incorrect
Posted by [Vadtec](#) on Wed, 11 Feb 2009 14:07:59 GMT
[View Forum Message](#) <> [Reply to Message](#)

I powered down the VM and changed the hd quota to 10G, and this was the result after power up:

```
[root@vps2 ~]# df -h
Filesystem      Size  Used Avail Use% Mounted on
/dev/simfs      10G  342M  9.7G   4% /
[root@vps2 ~]# ls -la /etc/mtab
-rw-r--r-- 1 root root 171 Feb 11 05:11 /etc/mtab
[root@vps2 ~]# ls -la /proc/mounts
lr-xr-xr-x 1 root root 11 Feb 11 05:12 /proc/mounts -> self/mounts
```

What is showing in HyperVM:

```
Resource  Used Max
Disk  342 MB 10 GB
Inode 20443 5242880
Memory 20 MB 512 MB
```

So I powered down again and changed the hd quota back to 100G:

```
[root@vps2 ~]# df -h
Filesystem      Size  Used Avail Use% Mounted on
/dev/simfs      59G  342M  55G   1% /
[root@vps2 ~]# ls -la /etc/mtab
-rw-r--r-- 1 root root 171 Feb 11 05:15 /etc/mtab
[root@vps2 ~]# ls -la /proc/mounts
lr-xr-xr-x 1 root root 11 Feb 11 05:16 /proc/mounts -> self/mounts
```

Here is what HyperVM is showing once again:

```
Resource Used Max
Disk  342 MB 100 GB
```

Inode 20443 52428800
Memory 20 MB 512 MB

Give than HyperVm was showing 10G and the VM was showing 10G, I do not see this as a HyperVM issue. How does OpenVZ allocate HD space, and does it allocate it all at once?

Thanks,

Vadtec

Hello,

this output confused me.

I cannot see /vz as a separate partition at the same moment we see "lvm:VolGroup01/130 /vz/root/130 simfs rw 0 0". Could you possibly explain how this might happened? How did you configure the HN?

And if /vz is not a separate partition "df -h" shows only 55Gb available so no wonder we obtain the similar result inside VE.

Thank you.

In HyperVM, there is an option that allows me to specify where the VM should be stored on the host machine. I have this set to lvm:VolGroup01, so as I understand it, OpenVZ should be storing the VMs in VolGroup01, not /vz...

Is this something where I should replace VolGroup01 with an ext3 formatted partition and mount it as /vz?

Never mind, I found the answer to my question. I was mixing up Xen and OpenVZ when I created the LVM. Xen can use LVM. That makes a little more sense now.

Vadtec
