Hello Every Body,

I'm new openvz user and i have some thing i dont know in it.

now i installed openvz correctly and i created a first vps but the problem is in the vps network i can login to it from the main server ssh but when u try to login to it via the ip which i assigned to it it doesn't work and the ip still open the main server not the vps, so how i can assign ip the my vps and make it work

Regards.

Please,

specify your problem in more detail

- what kind of network interface do you use inside VE: venet or veth?
- "ip a l" from HN and from inside the VE
- "ip r l" from HN and from inside the VE
- check sysctl parameters http://wiki.openvz.org/Quick_installation#sysctl
- and please read http://forum.openvz.org/index.php?t=tree&goto=27545&#msg_27545

Thank you.
