Hello community,

i have taken a small iptables script i've found years ago on a site called
<http://harry.homelinux.org>

and tweaked it over the years to fit my needs and adopted recently so it will secure an openvz HN with containers that have international ip-addresses.

i've written it in two parts, the init-script and an config file. it's quite specific to what type of ip filtering i need, but maybe someone out there could use it too?

as i couldn't do much testing yet there are for sure bugs and incompatibilities in there, but i thought maybe some of you would like to give it a try.

it should be relatively easy to adopt the script to your enviroment and maybe i will write a version where more options can be configured via the config file.

i will at least test and improve the script a bit and write a version that will work on containers as well (actually it should already, but there are table-rules that are not wanted inside a container).

if it's somewhat stable it maybe a thing for the iptables article in the openvz-wiki?!

looking forward to suggestions...

Joe

quick overview on what it actually does:

- * closes ports on all devices
- * enables loopback and internet-to-venet communication
- * open specific ports globally (like http)
- * open specific ports to trusted ip's, hostnames or blocks (like imap, dns)
- * option to define DMZ and BANNED IP's/blocks
- * option to only open specific ports/protocols for individual ip's/blocks/hostnames

as expected there were loads of bugs, it now just works just fine on my hardware nodes.
enjoy...

slightly updated version, as I use it at the moment.

is there actually someone who cares for an OpenVZ-comaptible iptables-script?

Edit: Uploaded the wrong version - hopefully this one's the right one , -)

1)
I've created one too http://github.com/sunoano/bash/blob/master/packet_filter

I also wrote some docu how to use it
http://sunoano.name/ws/public_xhtml/firewall.html#sunos_rule_set_and_how_it_is_applied

2)
I also have another script called vzbulk <http://github.com/sunoano/bash/blob/master/vzbulk> This one has nothing to do with firewalling but might be useful; docu is inside the script at the top.
