Hello,

could you please describe your configuration.

What custom settings do you have?

Could you please show:

- ls -l /vz
- cat /proc/mounts

You could also strace "vzctl destroy"

http://wiki.openvz.org/Stracing_a_program

What version of vzctl do you have?

"vzctl --version"

Hello,

i have solved problem by changing the name of vps folder in /vz/root

and recreate it again

thanks for all
