I presume OpenVZ won't run ON a Fedora Core 10 box? I presume there are distinct differences between kernels and underlying architecture?

I tried without success.

I gather I need to go with a 2.6.18 kernel?

Is OpenVZ tied to RHEL releases?

Cheers
Simon

I'd be interested to see an answer to this as well. I can't seem to locate any list of Fedora versions supported.

Certainly for the containers, I need to have the latest version of Fedora possible in order to comply with security requirements.

I'm wondering, if I install OpenVZ on Fedora 8, can I install Fedora 10 on a container? Or am I limited to using 8 until I can upgrade the host system?

Thanks in advance
Richard
