Subject: WebVZ runs under latest Ruby on Rails version Posted by shuaib85 on Mon, 16 Mar 2009 22:46:00 GMT View Forum Message <> Reply to Message

Dear all

It has been sometime I was busy and inactive. After receiving several emails about webvz that it is not running under latest ruby on rails versions. I have modified it to work with that. At the moment there is no extra features added to it.

You can download the latest webvz from github.com at the following link http://github.com/shuaibzahda/webvz/tree/master

Please choose download and download the file, extract it and run it as usual

for more information visit the website of webvz at http://webvz.sourceforge.net

I will be glad to receive new features to be added in the coming release

Thanks Shuaib Zahda WebVZ Developer
