Hi,

It is possible to install the OPENVZ in a VPS? Or either, to have vps of another VPS inside?

The VPS can only see virtual network adapter and filesystem, not the real thing. So I believe the answer is no.

CleberDantas is right. It isn't possible now.

For example, OpenVZ architecture strongly relies on the fact that there is only one privileged VPS - VE0 (Hardware Node).

we had an implementation of hierarchical VEs about 2 years ago. However, it was very impractical and very questionable on how to manage them. So it was dropped at that moment.
