Hi all,

I want to add iptables for my OpenVPN server inside a VE but get the following error:

```
root@vpnserv:~# iptables -t nat -A POSTROUTING -s 192.168.99.0/24 -o eth0 -j MASQUERADE
FATAL: Could not load /lib/modules/2.6.24-23-openvz/modules.dep: No such file or directory
iptables v1.3.8: can't initialize iptables table `nat': Table does not exist (do you need to insmod?)
Perhaps iptables or your kernel needs to be upgraded.
```

For the installation of Zimbra I get the same error.

I hope there's a way around it?

Thanks in advance!

Hello,

are you sure that iptables nat and MASQUERADE modules are loaded on the HN (before VE is started).
