Hi,

I've been performing automated backups using vmdump and lvm snapshots for a while, but it stopped working.

Now I get these errors:

Mar 26 09:53:44 ERROR: creating backup for VPS 104 failed (0.10 minutes): command '/usr/sbin/lvcreate --size 500m --snapshot --name vzsnap /dev/' failed with exit code 3 at /usr/bin/vmdump line 290.

It looks like a variable is not populated correctly for the device name.

It works ok with other methods. Any ideas?

Thanks,  
Ugo
