Hi,

I have to run OpenVZ on my test box server.

What control panel should I install on this machine ?

I saw many but outdated, from half year no updates, no development action,

I don't want to install something what's is non developed.

For what OS I need that ?
-Can be anyone.

I will be appreciate for answer my question.

Regards

Hi,

hypervm  - what's OS is require ?

On docs on required i saw only Yum ?

Can be Centos ?

Regards
