Forgive the question which I'm sure is covered elsewhere - however I could not find it :

How do I determine which VE's start on machine (host-node) boot up?

Thanks.

Something like
grep BOOT=yes /etc/vz/conf/*.conf
should work.

Hi,

if I understand you correctly you should check "--onboot" parameter of vzctl utility (man vzctl) and "ONBOOT" variable in VEs configuration file.
