Hi folks,

OpenVZ

Host - Ubuntu 8.04 workstation

VE(existing guest) - 101

I'm prepared following;

[http://wiki.openvz.org/Cloning\\_VE](http://wiki.openvz.org/Cloning_VE)

to duplicate a new VE of 101 and name it "102"

I can't find following package on repo;

satimis@vz0:~\$ apt-cache policy pushd

W: Unable to locate package pushd

satimis@vz0:~\$ apt-cache search pushd

obexpushd - program for receiving files via Bluetooth

# vzctl stop 101

Unable to stop: VE is not running

The guest "VE" is NOT running.

# ls /etc/vz/conf/

0.conf 102.conf.destroyed ve-vps.basic.conf-sample

101.conf ve-light.conf-sample

Re: pushd /vz/private/\$OLDVE; .....

the directories don't exist. Whether creating them?

Please advise.

TIA

B.R.

satimis

Hello,

Quote:

I can't find following package on repo;

It's a bash built-in function.

Quote:

Re: pushd /vz/private/\$OLDVE; .....

the directories don't exist. Whether creating them?

The first line of the wiki page:

Quote:

OLDVE=222 NEWVE=333

In your case OLDVE should be 101, NEWVE - 102.

Hi maratrus,

Thanks for your advice.

```
# ls -l /var/lib/vz/  
total 20  
drwxr-xr-x 2 root root 4096 2008-04-21 22:19 dump  
drwxr-xr-x 2 root root 4096 2009-04-02 23:02 lock  
drwxr-xr-x 3 root root 4096 2009-04-01 11:53 private  
drwxr-xr-x 3 root root 4096 2009-04-01 11:53 root  
drwxr-xr-x 3 root root 4096 2008-09-24 18:54 template
```

```
# ls -l /var/lib/vz/root  
total 4  
drwxr-xr-x 20 root root 4096 2008-09-24 21:32 101
```

```
# locate 101.conf  
/etc/vz/conf/101.conf
```

Then I'll run;

```
# mkdir /var/lib/vz/root/102  
  
# cp /etc/vz/conf/101.conf /etc/vz/conf/102.conf  
  
# mkdir /var/lib/vz/private/102  
  
# pushd /var/lib/vz/private/101; tar c --numeric-owner * | tar x --numeric-owner -C  
/var/lib/vz/private/102; popd
```

If I'm wrong, please correct me. Thanks

B.R.  
satimis
