Anybody have any idea why services within a container would be very slow to autostart. When we start VZ the container comes up very quickly and allows us to go into it. However, the services take a long time to actually start loading. When we start the services individually they come right up, maybe 10-20 seconds. When the services auto-start from bringing up a container it takes them 5 minutes or more. There are 3 services in question: Httpd, MySQL and Asterisk.

I have the same issue.

I see you talked about http, mysql and Asterisk. Seems like we are trying to achieve similar tasks here. I have migrated a PBX in a flash to VE. And I found from /var/log/messages , once the xinetd started, it took another 3 minutes to finish all other service at boot. What's going on? I actually have 2 different HN, the one with ubuntu server has this problem . But the one with a CentOS HN don't have this issue, everything start right at the same minute.

Here is the log for the VE that runs on the Ubuntu(Debian) Hardware Node:

```
Apr 19 23:30:30 piaf xinetd[590]: xinetd Version 2.3.14 started with libwrap loadavg
labeled-networking options compiled in.
Apr 19 23:30:30 piaf xinetd[590]: Started working: 1 available service
Apr 19 23:33:49 piaf init: no more processes left in this runlevel
```

Here is the log for the VE that runs on the CentOS hardware Node:

```
Apr 19 23:20:36 piaf xinetd[3524]: xinetd Version 2.3.14 started with libwrap loadavg
labeled-networking options compiled in.
Apr 19 23:20:36 piaf xinetd[3524]: Started working: 1 available service
Apr 19 23:20:52 piaf init: no more processes left in this runlevel
```

Any other thing or service that could be causing the slow down? or is there something we need to change in xinetd's config file? By the way, the kernel version on Ubuntu is 2.6.24-23-openvz.

Our issue ended up being with Sendmail not being able to start because of a network

configuration. Try disabling that and see what it gets you.

Hi, thank you for the solution. You are right, once I disabled sendmail service, things went back to normal. Great find.
