Is there a nice way to figure out which VPS a process belongs to? (i.e. short of going through /vz/root/\*/proc and seeing if ##### exists there?)

There is a program vzpid in vzctl packet.

# vzpid 6705

Pid	VPSID	Name
6705	201	syslogd

Ahh.. that's exactly what I'm looking for. I didn't notice that utility for some reason. Thanks.

You can also use modified ps/top utilities to see VE processes:

<http://download.openvz.org/contrib/utils/vzprocps-2.0.11-6.1.2.swsoft.src.rpm>

-E option given to vzps adds VEID column to its output.

-E <VEID> option shows processes of given VE only.
