Hi folks,

Host - Ubuntu 8.04 workstation

Guest (VZ) - Ubuntu 8.04, base OS

I have 2 VZ running on this box. Both are base OS without X. They are working. Network connection established. They can be ping on their IP address.

```
root@vz0:/home/satimis# ls -al /var/lib/vzctl/veip/
total 16
drwxr-xr-x 2 root root 4096 2009-04-18 21:40 .
drwxr-xr-x 3 root root 4096 2008-09-24 18:54 ..
-rw-r--r-- 1 root root  14 2009-04-19 14:47 101
-rw-r--r-- 1 root root  14 2009-04-19 14:47 102
```

Now I want to remove 102 completely. Whether run following command after stopping 102;

```
# rm /var/lib/vzctl/veip/102
```

?

Any further action is needed? Please advise. TIA

Edit:

I found it running;

```
$ sudo vzctl destroy 102
```

```
Destroying VE private area: /var/lib/vz/private/102
```

```
VE private area was destroyed
```

```
$ sudo vzctl start 102
```

```
VE config file does not exist
```

Any further action?

B.R.

satimis

# vzctl destroy 102

should be enough.  
Please notice that 102.conf file is renamed to 102.conf.destroyed

Please notice that 102.conf file is renamed to 102.conf.destroyed  
Hi maratrus,

Thanks for your advice.

Shall I delete it?

It's up to you.  
If you don't need it, of course you may.
