Subject: veth and cpt and restore
Posted by llaehn on Sun, 19 Apr 2009 16:34:06 GMT

Hello,

i have found the article http://forum.openvz.org/index.php?t=msg&goto=11157&&
amp;srch=undump#msg_11157

I have the same problem. Is there any solution to this problem?

thanks
lars

Hi,

what kernel do you use?

Hi,

i use Debian etch.
Kernel 2.6.18 028.18.1-2.6.18-12-1 from OpenVZ
vzctl 3.0.23-1dso1

I tested and have now more infos:
I have two Machines.
If the server some hours online i can't vzmigrate from one to the other.
If i restart the Server i can vzmigrate.
After this i can't migrate back until i restart the servers.

If i ifconfig eth0 down in my VE. The migration works fine without restart servers. But its not
onlinemagration

thanks for help
lars

Quote:
Kernel 2.6.18 028.18.1-2.6.18-12-1 from OpenVZ

I don't understand what this record means.
Is this "uname -r" output?

There was a similar bug but it has been already fixed.
Do you have a chance trying the last 2.6.18 or rhel5 based 2.6.18 kernels?
