I have been looking at openvz and it sounds really interesting.

I have been reading some manuals and doing a bit of searching but I can't find answers to the following questions...

When adding hdd's, how should they be mounted? Under /vz2 /vz3 or something?

And about big ram 4gb+

Would I have to be running a 64bit host and 64bit templates? Or is there some modifications so I could use 32bit host and templates?

Thanks.

What do you want to do with that hdd?

You can use for example PAE kernels.

<http://download.openvz.org/kernel/branches/rhel5-2.6.18/current/>

<http://download.openvz.org/doc/OpenVZ-Users-Guide.pdf>

I am thinking for later, if I fill my server with vps's if I could add a second hdd and add vps's to it?

Bump!

Can anyone help me with the second hdd issue?

Hi,

sorry for delay.

Quote:

if I could add a second hdd and add vps's to it?

yes, of course.

Just mount it somewhere, for example to /vz/private1.

And then use the option "--private /vz/private1" with "vzctl create" command

Great!

I love how simple openvz is!
