(x-posted and translated from Russian, since the activity there is very low)

We have a problem once again...

The server layout is: 2x Xeon 5140 (4 cores total), 16 GB RAM, SAS RAID 1. Installed are: OpenVZ, Debian (in the HN and VE alike), drbd. After some days of usage the machine started to show lack of free memory, and the most of it is Inactive in /proc/meminfo. After we've killed absolutely everything (with SysRQ+E!) the memory wouldn't free.

Inside of the node are various components (the HN is clean) - apache2+php, mysql5, mail, ejabberd, bind9.

Here are the stats.

If there are some UBC errors, please point to them, as I'm relatively new to OpenVZ in general.

What kernel version do you have?

What are your UBC values?
