Almost every day 1 from my vpses hang up:

#vzctl enter 101
enter into CT 101 failed

#vzctl restart 101
Restarting container
Stopping container ...
Unable to stop container: operation timed out

#vzlist -o veid,laverage -s laverage
112 0.00/0.00/0.00
111 0.00/0.00/0.00
110 0.00/0.00/0.00
108 0.00/0.00/0.00
102 0.00/0.00/0.00
101 5.99/5.97/5.91

Only reboot helps, but the next day situation is the same

Debian GNU/Linux 4.0 2.6.18-12-fza-amd64

What is the possible reason of this trouble?
