Hi everybody,

OS: CentOS 5

I would like to add a route to a table automatically when venet0 comes up (on system start for example).

To add the route manually this works:
ip route add 10.3.0.0/24 dev venet0 table mytable

But after a system restart this is gone of course.

I tried to create the file /etc/sysconfig/network-scripts/route-venet0 with this content:
10.3.0.0/24 dev venet0 table mytable

It works this way with normal eth interfaces but not with venet0.

Any idea?

Thanks
schogge

It seems like the script /etc/vz/dists/scripts/redhat-add_ip.sh has something to with adding routes for venet0. Unfortunately I don't understand this script completely so I can't modify it to do what i want.

Does anybody has any hint?

The script redhat-add_ip.sh seems to be not helpful in this case.

But I think I have another solution:

The OpenVZ start script `/etc/init.d/vz` has a function called `start_net()`. At the end of this function I added the following line:

```
ip route add 10.3.0.0/24 dev venet0 table mytable
```

This is working at the moment.

Does anybody has any thoughts that I'm breaking something by doing this?
