Hello,

Can i make kvm to work with openvz?!
i now have openvz setup and work, because openvz can`t work with windows, i would like to put kvm for that.
Is this posible?

p.s: i don`t want use proxmox, because he work on debian, i want use on centos.

Thank you.

As proxmox shows it -- yes, it is possible, and you can.

ok, it`s logical
but, i afraid that i don`t screw up exist openvz server, because i have some vps now on him ...

I wouldn't recommend doing the tests on a production server. A virtual machine such as VirtualBox should be just fine for testing...

Have you seen this thread: http://forum.openvz.org/index.php?t=msg&th=7359&star t=0?

In short, it can be done on CentOS 5.3 but I didn't have time for further tests yet (networking, stability, etc.). Please post your findings if you try it out.

Check also opennode.sourceforge.net - CentOS + openvz + KVM...
