Hi guys,

I'd like to know what packages are required by openvz. For instance, do I need apache installed?

I'm using the Fedora Core 5 kernel-2.6.16-1.2111\_FC5.026test012.i686.rpm

I can boot into Fedora perfectly fine but booting into the OpenVZ kernel causes all sorts of errors with symbols all over the screen lol.

Should I switch to the stable kernel?

I believe, the only needed packages are those, that are in requirements of rpm-package, otherwise it's a BUG:

```
# rpm -qRp kernel-2.6.16-1.2111_FC5.026test012.i686.rpm
rpmlib(VersionedDependencies) <= 3.0.3-1
fileutils

initscripts >= 8.11.1-1
mkinitrd >= 4.2.21-1
/bin/sh
/bin/sh
/bin/sh
rpmlib(PayloadFilesHavePrefix) <= 4.0-1
rpmlib(CompressedFileNames) <= 3.0.4-1
# rpm -qRp vzctl-lib-3.0.10-1.i386.rpm
/bin/bash
