There are two interfaces:

eth0 (MAC = Mac1, IP1 = A.B.101.43, IP2 = A.B.101.150)

eth1 (MAC = Mac2, IP3 = A.B.102.52, IP4 = A.B.102.74)

HardwareNode (IP = IP1)

Required:

VPS1 (IP = IP2, must work through eth0)

VPS2 (IP = IP3, must work through eth1)

VPS3 (IP = IP4, must work through eth1)

How to customize?

Just make sure that IP2 is A.B.101.XXX, IP3 is A.B.102.YYY and IP4 is A.B.102.ZZZ -- that is all what's needed.

And I end up with a 3 VPS with 2 ends and 4-addresses?
