Hi Guys,

I'm planning to build a virtual cluster using the CAOS NSA linux distribution under OpenVZ.

Do you know if there exists some template/repository of that distribution?.

Any help in the matter will be welcome.

Thanks in advance.

Josep

See articles in <http://wiki.openvz.org/Category:Templates> to find out how to create your own templates. Those articles are distro-specific so you won't find an exact info about yours, but you should get some basic ideas.
